

The Operational Domain of the System Architecture Framework (SAF)

19.11.2020 Tag des Systems Engineering (TdSE)– Online –

- Dipl.-Ing Elektrotechnik (Nachrichtentechnik)
- 2005 - 2015 Systems Engineer bei Airbus Defence & Space
- 2016 - 2020 System Engineer bei Continental, BU ADAS
- 2020 - heute Head of Process Group Technical Engineering Processes @ Continental Automotive
- Schwerpunkt im Bereich der (modellbasierten) Systementwicklung (MBSE)
- Schriftführer der Gesellschaft für Systems Engineering (GfSE)

Teilnehmer in der SAF- Arbeitsgruppe

AIRBUS

 **ATLAS ELEKTRONIK**

HENSOLDT 
Detect and Protect.

invenio

 **SODIUS
WILLERT**

- Understanding the Need behind a customer request, the stakeholders in general and of the environment.
- ISO15288 relation:
 - "Business and Mission Analysis" and "Stakeholder Needs and Req. Def. Process"
- per se solution free:
 - Focus on organisational Entities and operational processes
- Identification of Development Scope and Context (functional/physical)
- Stakeholder Identification and their Needs
- Supports ConOps definition
- Self-Constraint: Compatibility to UAF/NAF for carry-over

→ **Application Case 1** : Product development (pre-market)

Anticipate and Analyze Operational Environment, Processes and Needs
-> derive valid Stakeholder Requirements for a future Product

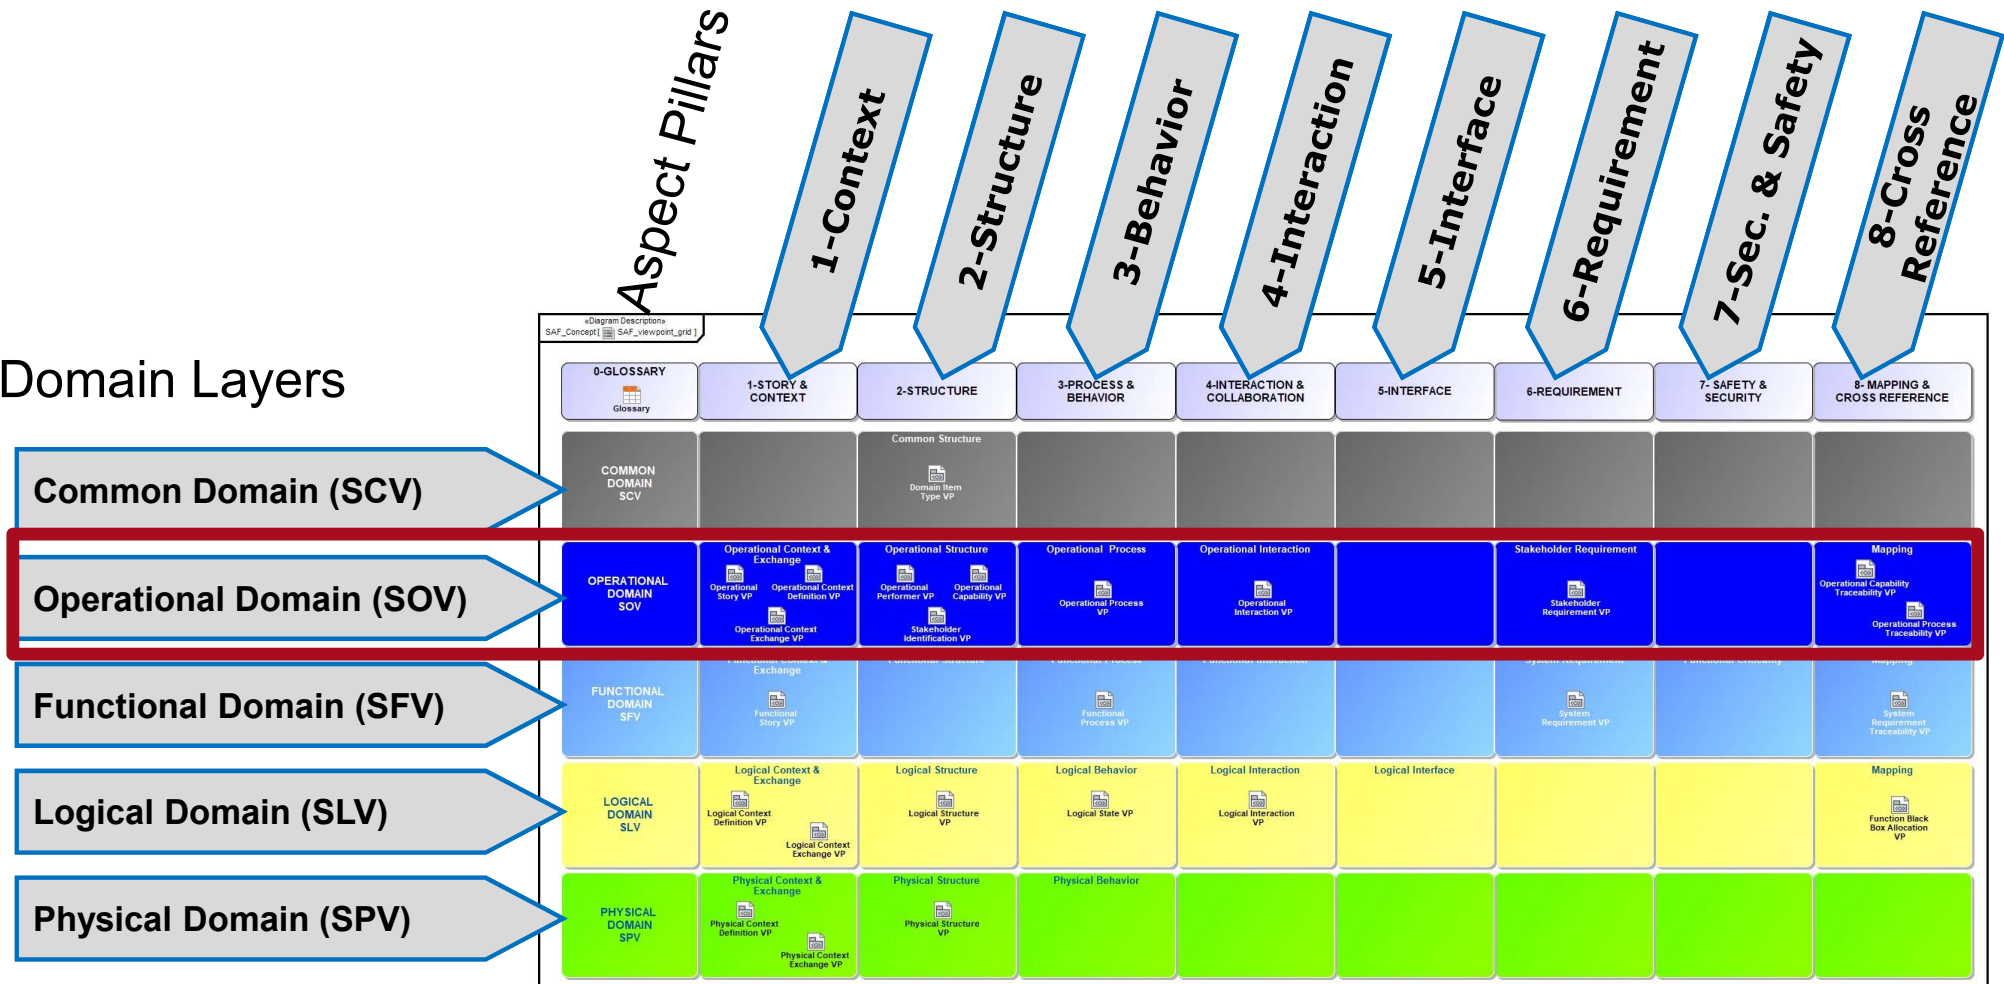

→ **Application Case 2** : Engineering on existing Stakeholder Requirements (understanding request)

Validate and Improve Stakeholder Requirements Understanding
by supporting them with modeling

→ **Application Case 3**: Continue existing Enterprise Framework (EF) Model with SAF (carry on UAF/NAF/... model)

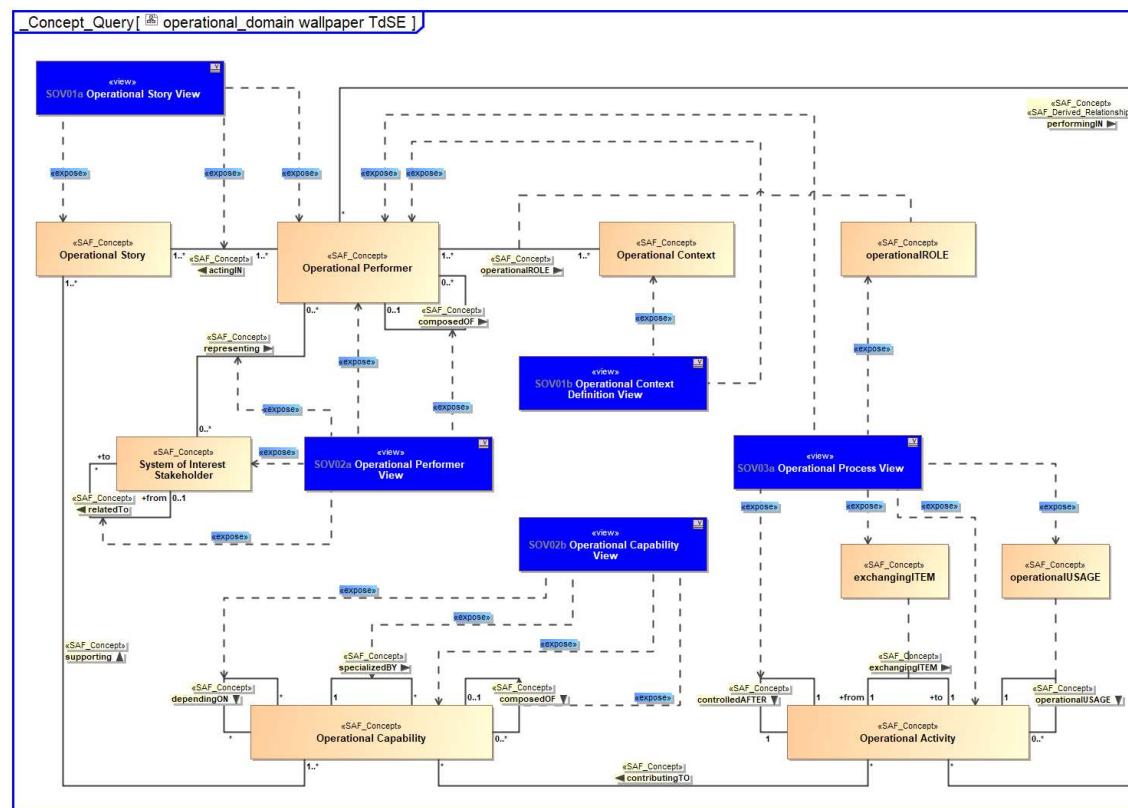

→ Metamodel of SAF Operational Domain is compatible to Enterprise Frameworks for seamless transition to SAF Functional/Logical/Physical Domains

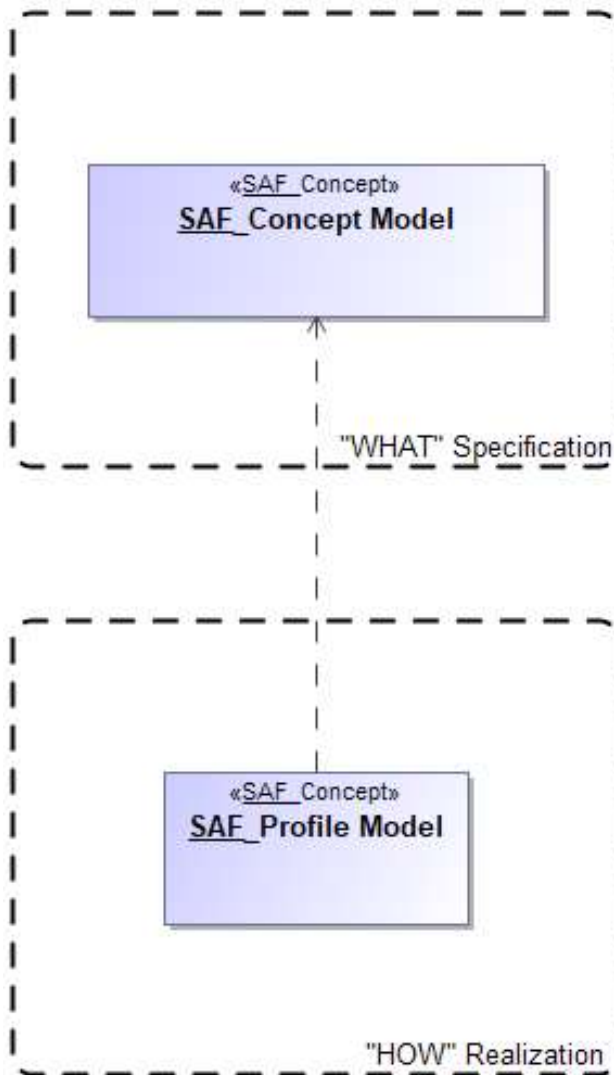

Domain Layers

Note: Shown Viewpoints in presentation are only a SOV sub-set!

- Models contain extensive information
- stakeholder need only specific information at a dedicated time
- A **Viewpoint** specifies a specific data collection
- In SAF Concept also the Relations between **Model Elements**

SAF Concept Model defines

- Which model elements are used in architecture model
- Relationships between model elements
- Viewpoints available
- Model elements represented in particular view

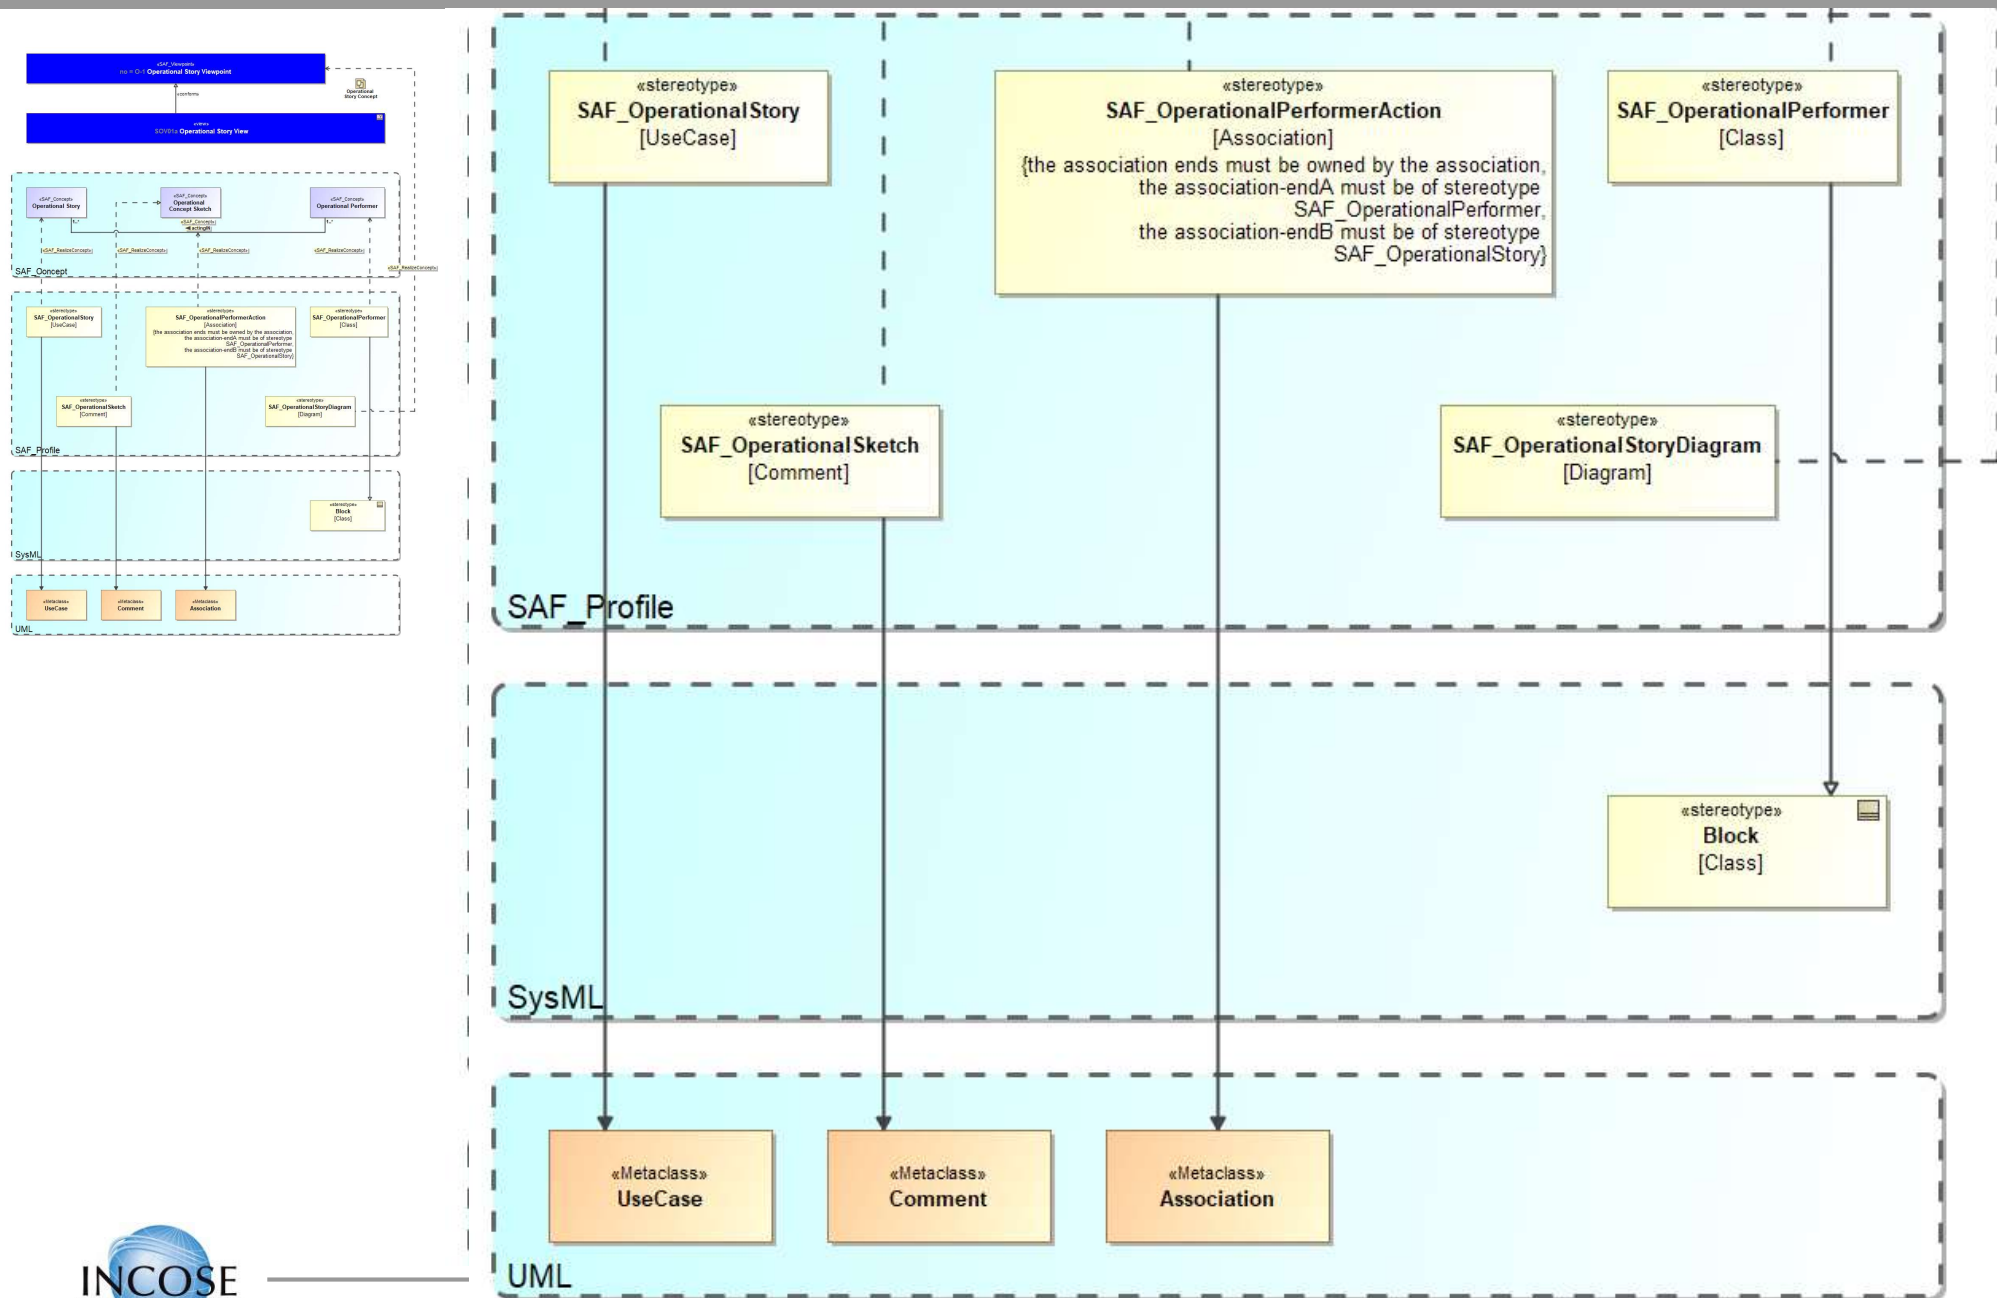

Poses binding definition for realization!

SAF Profile Model

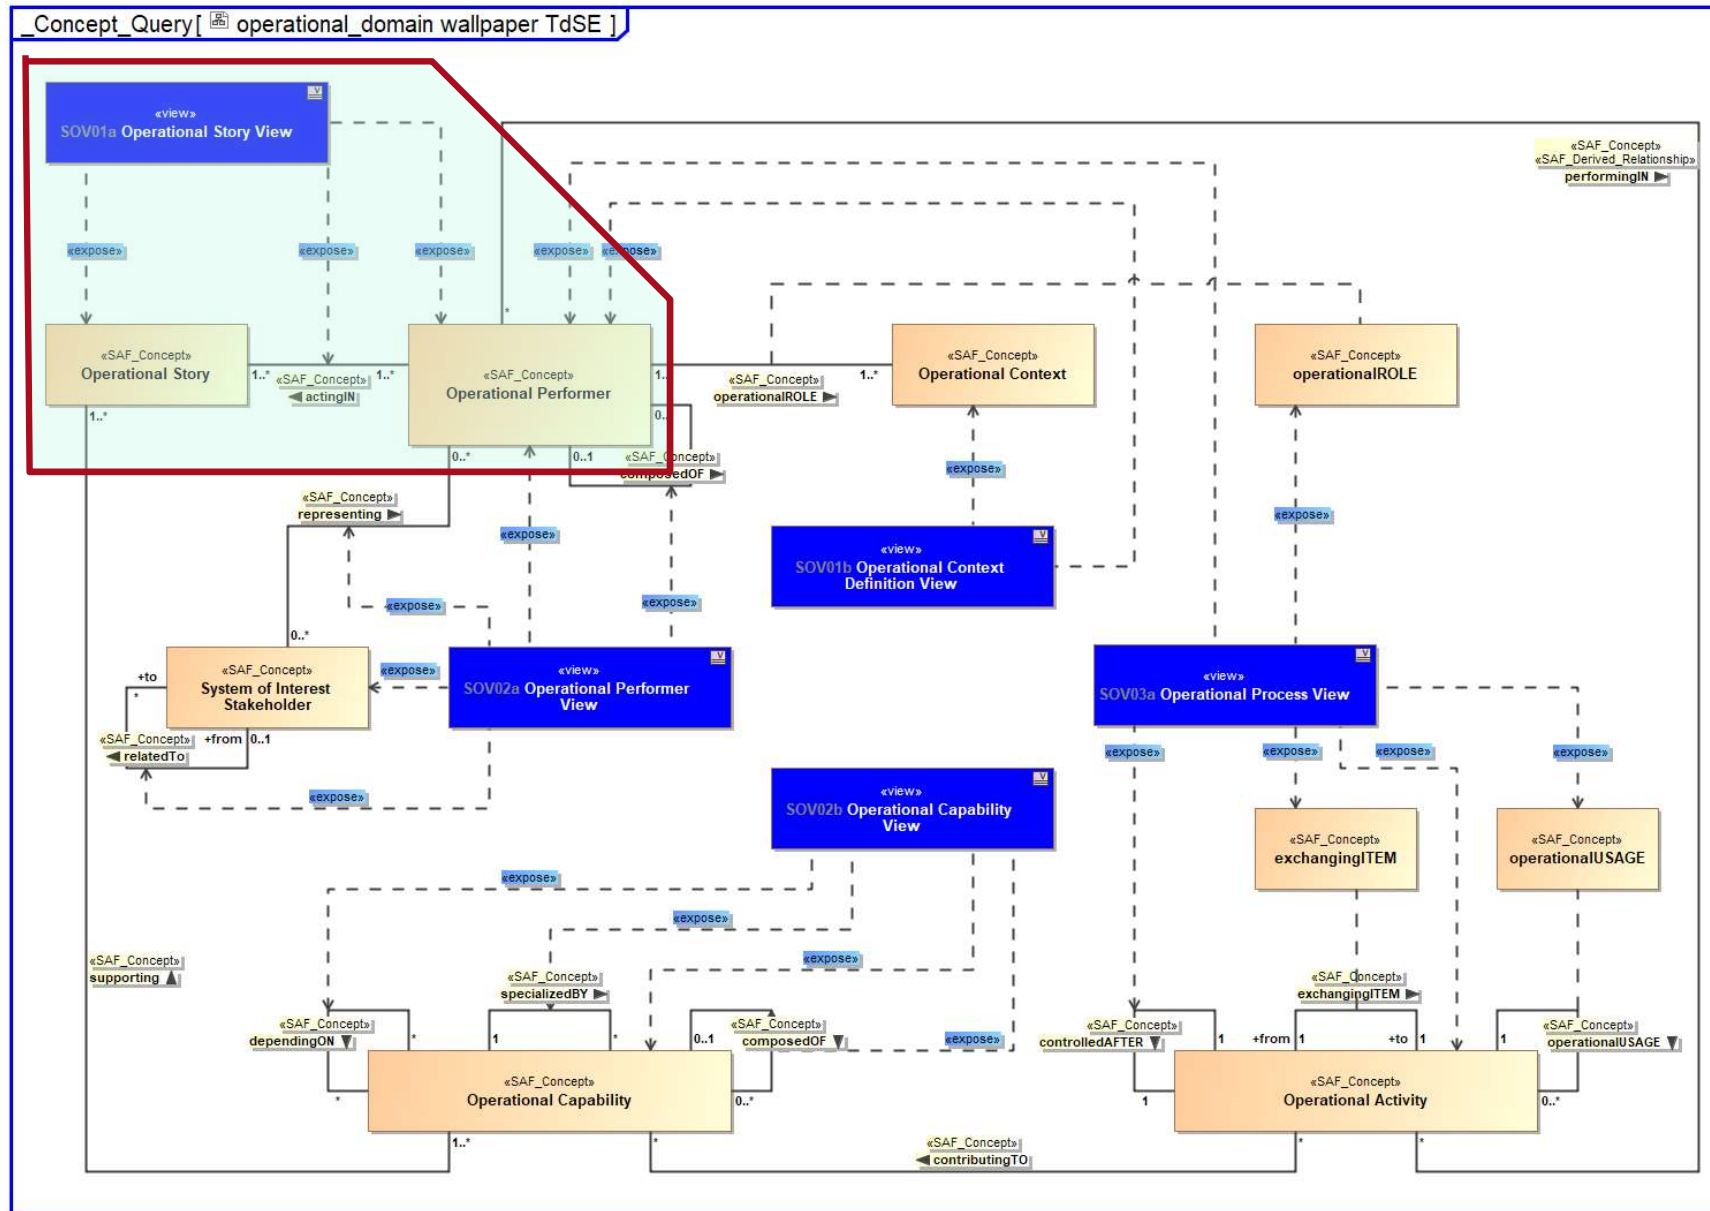

- Defines how the model elements and realations are modelled
- Founds on SysML (and UML)
- Provides additional Stereotypes

Is compliant to Concept Model

From Concept to Profile

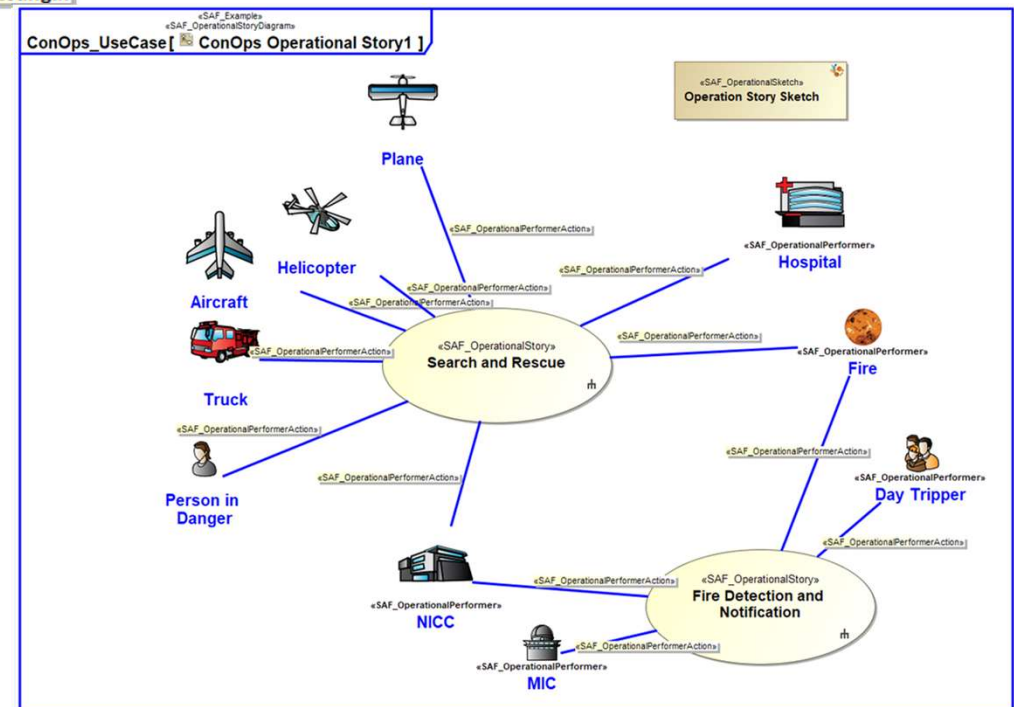

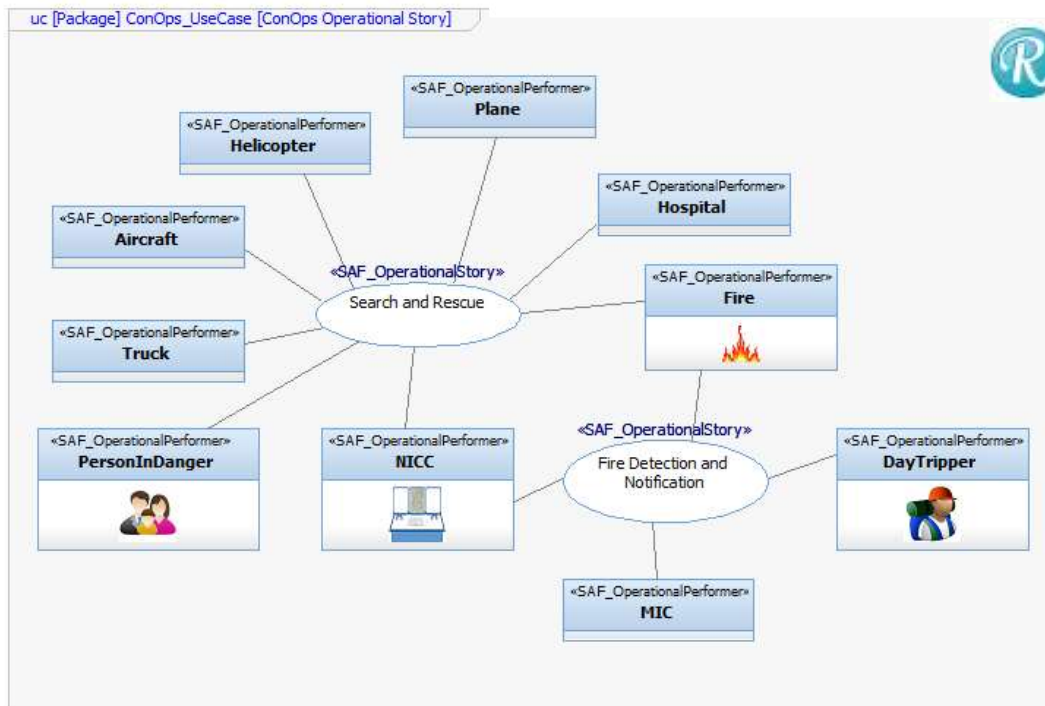

SOV Operational Story ViewPoint

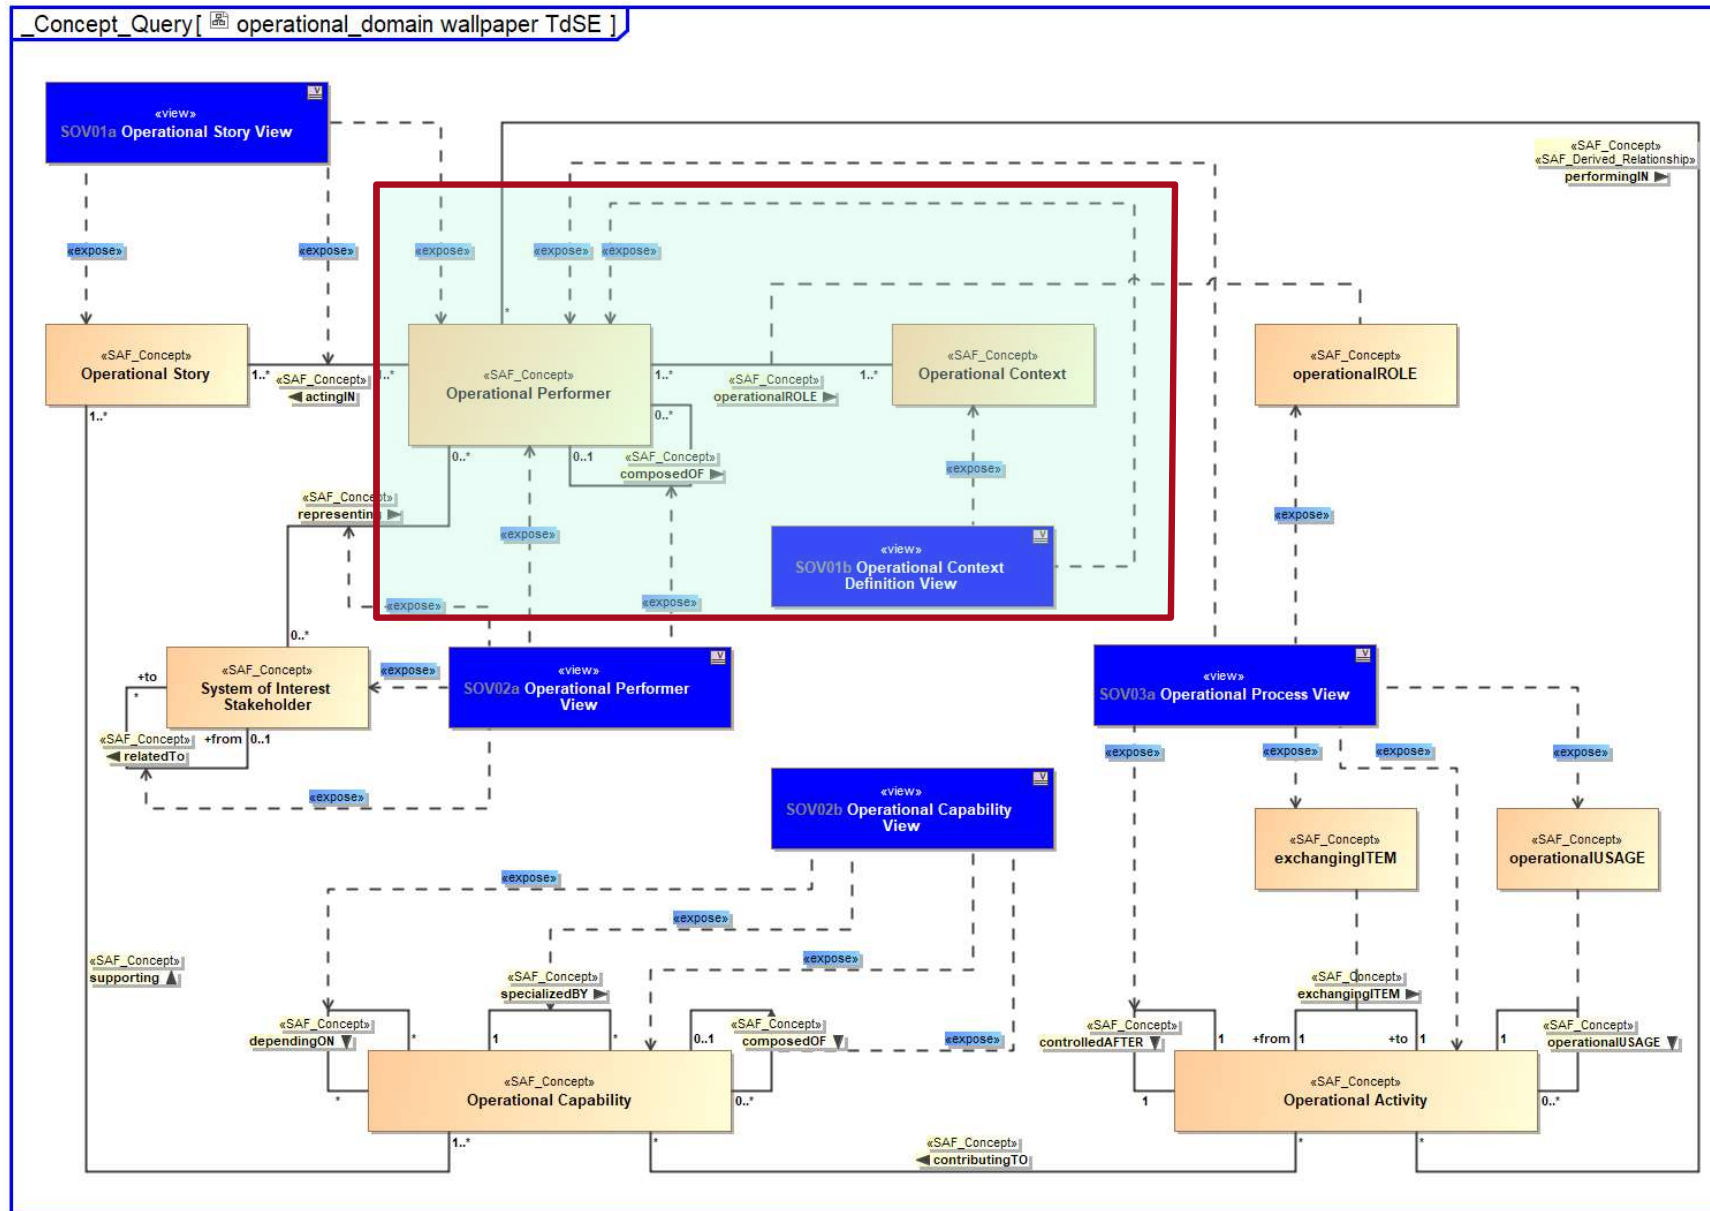

SOV Operational Story ViewPoint

- Purpose: Identify **Operational Stories** and **Operational Performers** and the **relationship** between them

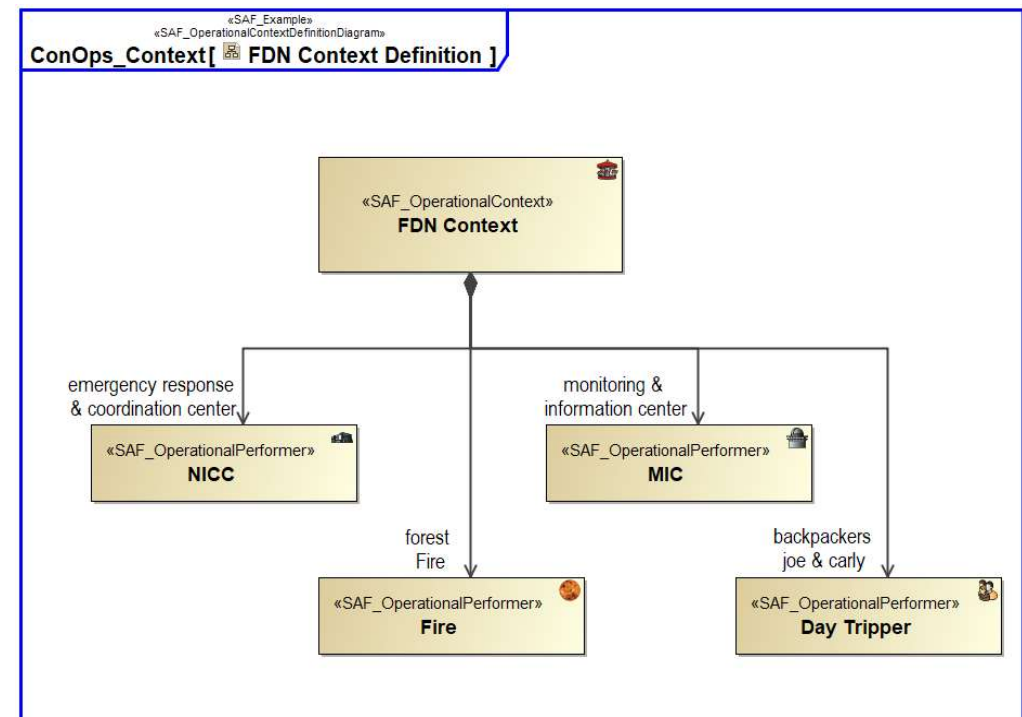

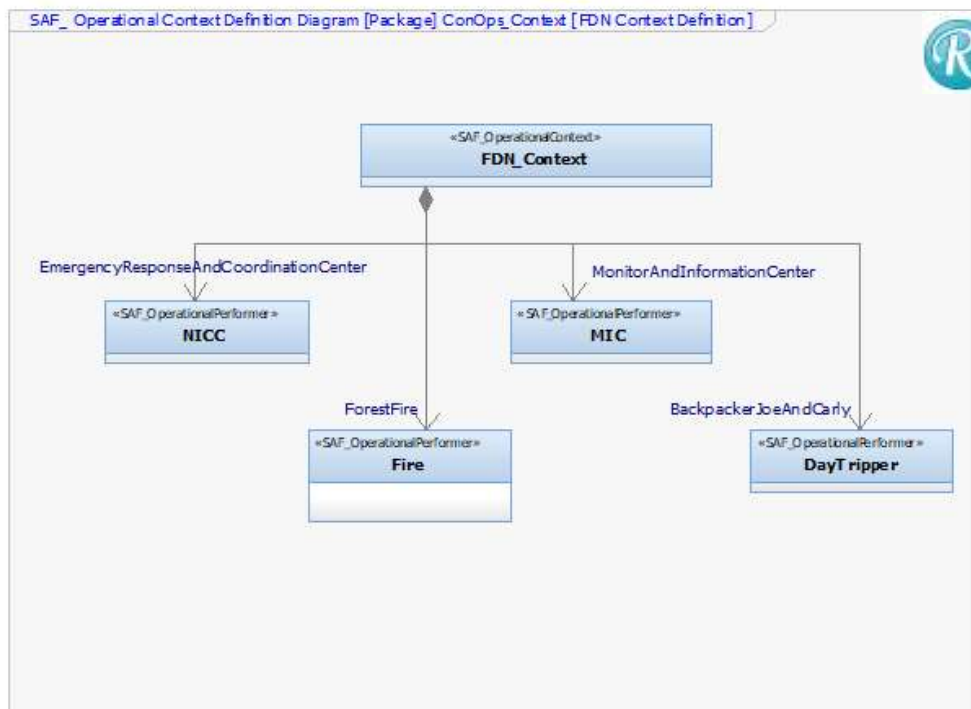

SOV Context Definition ViewPoint

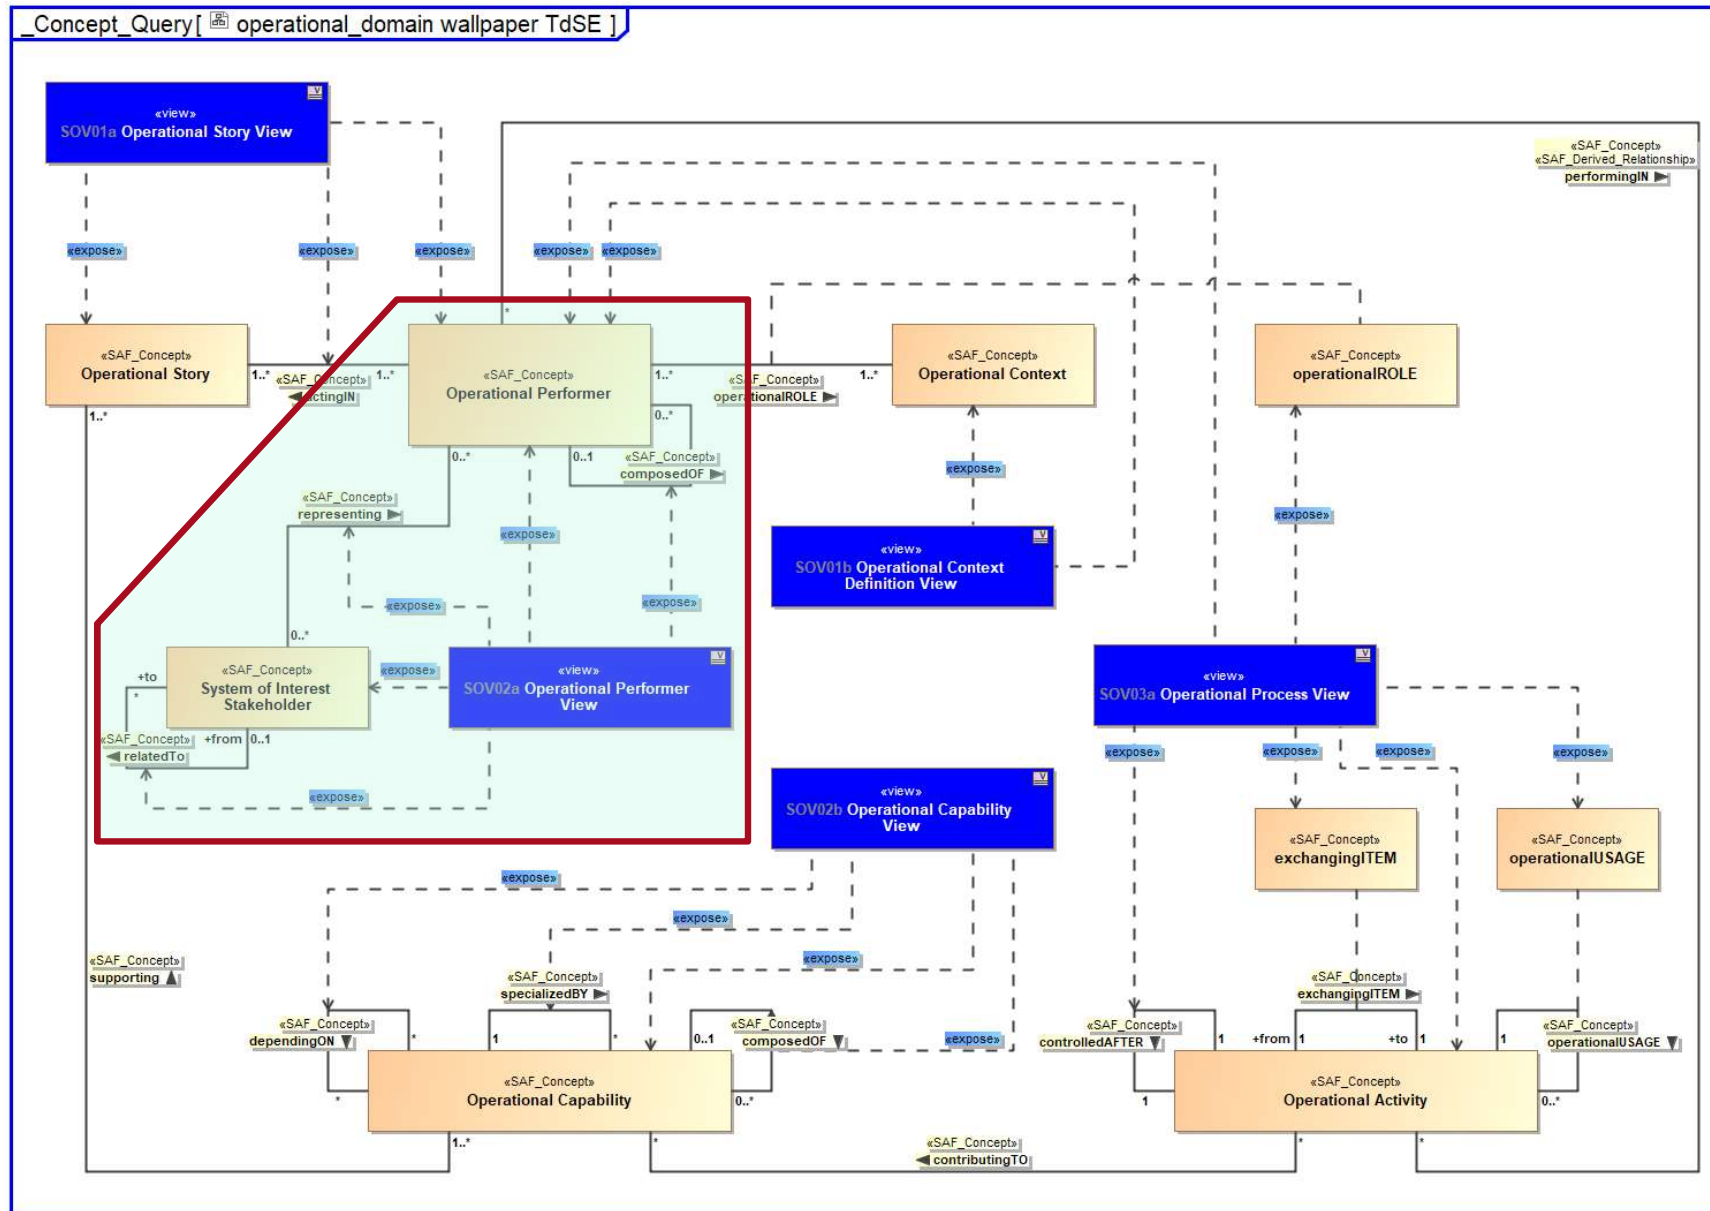

SOV Context Definition ViewPoint

■ Purpose:

Identify the **Operation Performers** and their **Operational Role** in a defined **Operational Context**

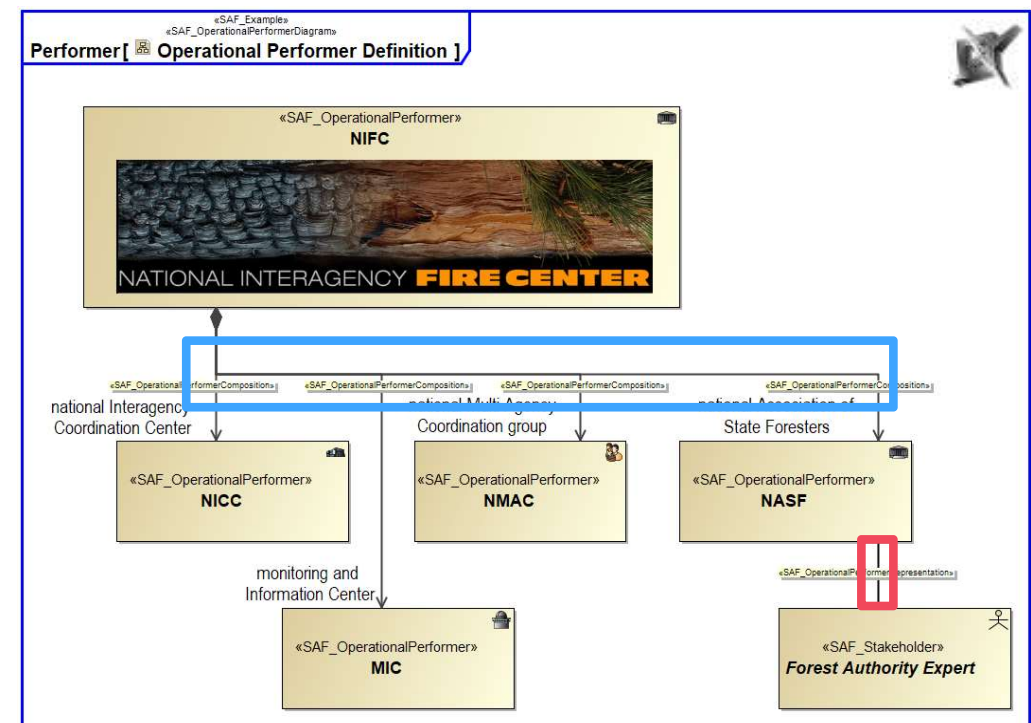

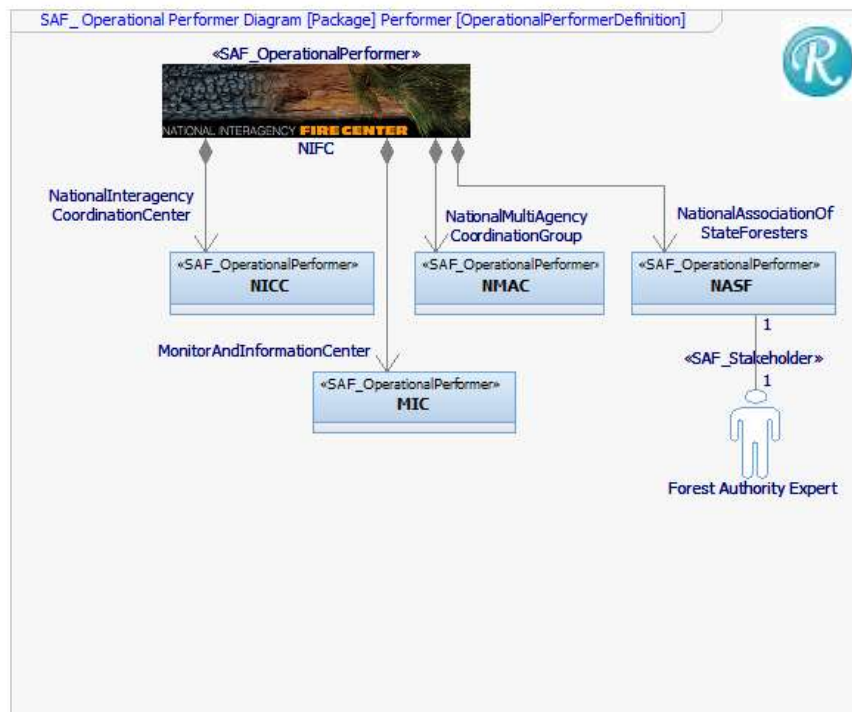

SOV Operational Performer ViewPoint

SOV Operational Performer ViewPoint

- Purpose: Represent the **taxonomy** of the identified **Operational Performer(s)** being relevant for the understanding of the operation of the solution with related **stakeholders**.

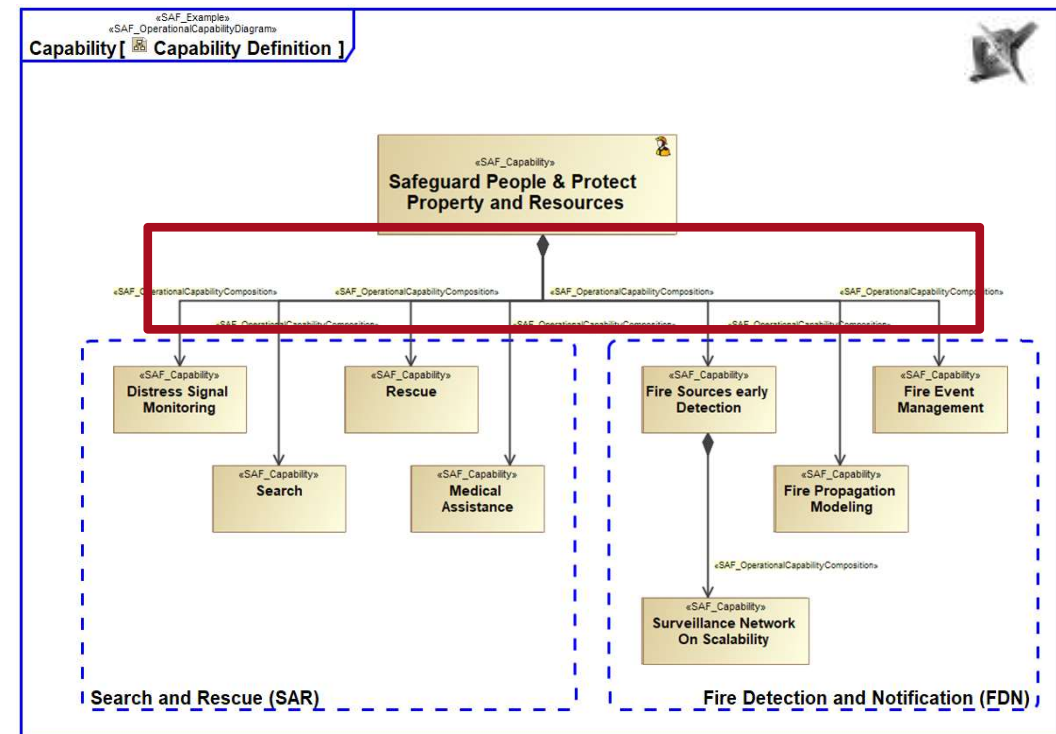

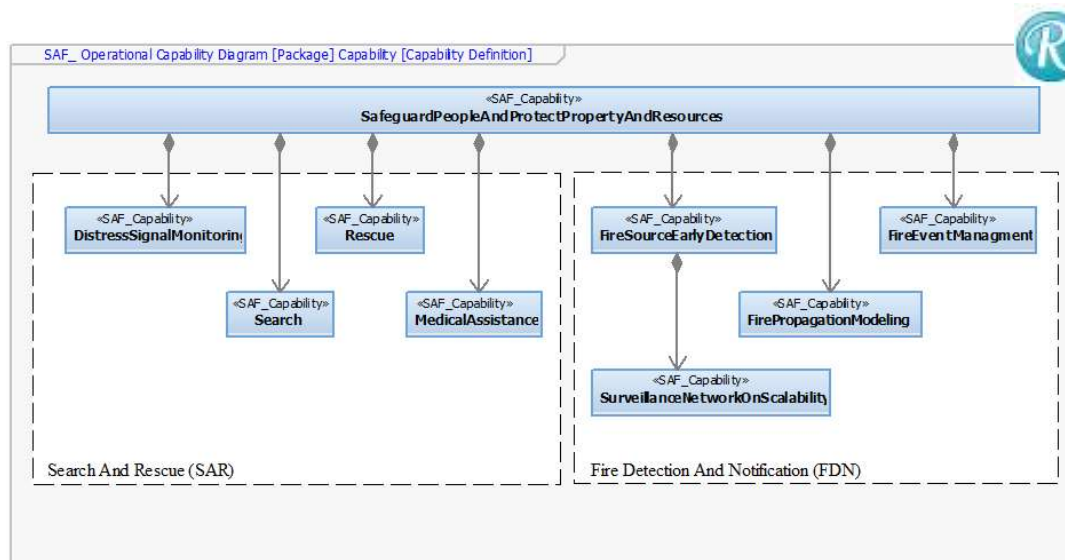

GfSE
Gesellschaft für
Systems Engineering e.V.
GERMAN CHAPTER OF INCOSE

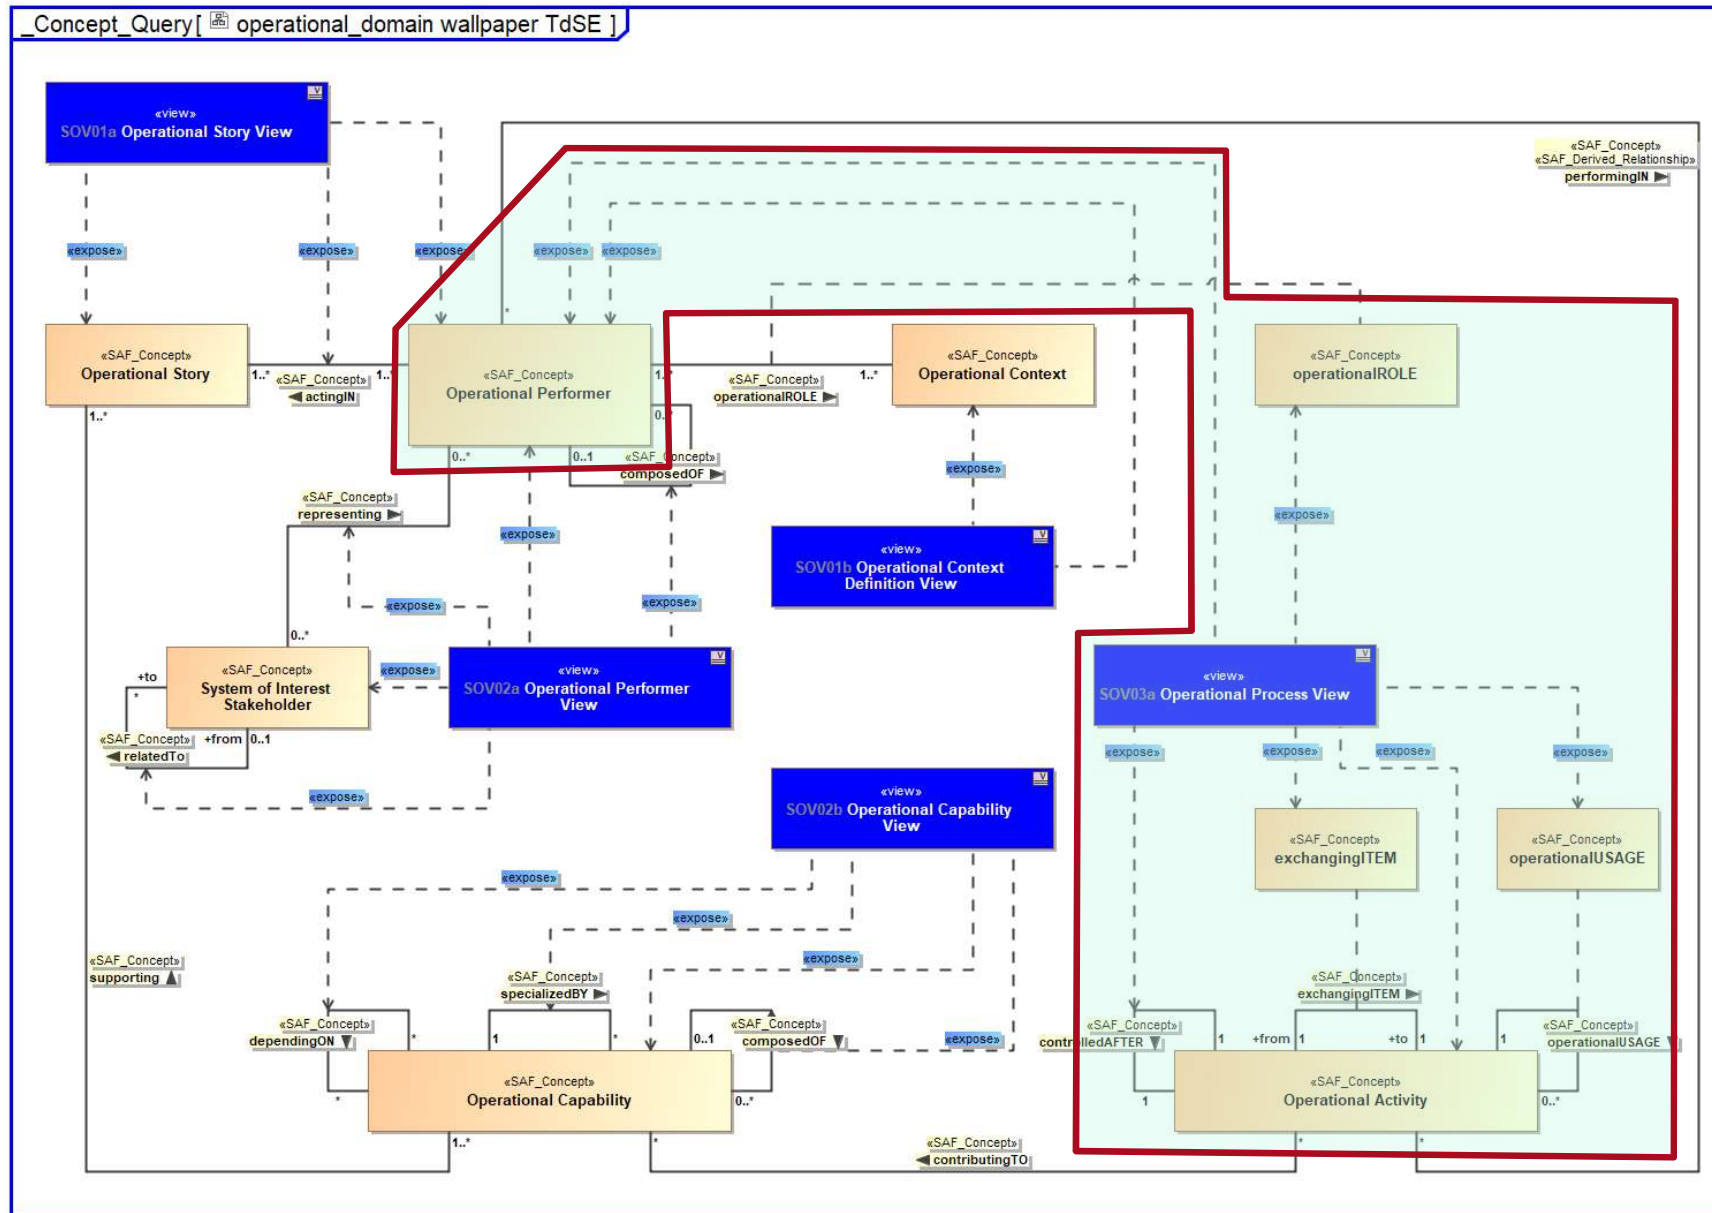

SOV Operational Capability ViewPoint

- Purpose: Define the taxonomy of capabilities from a stakeholder's perspective, including composition, specialization and dependencies between capabilities.

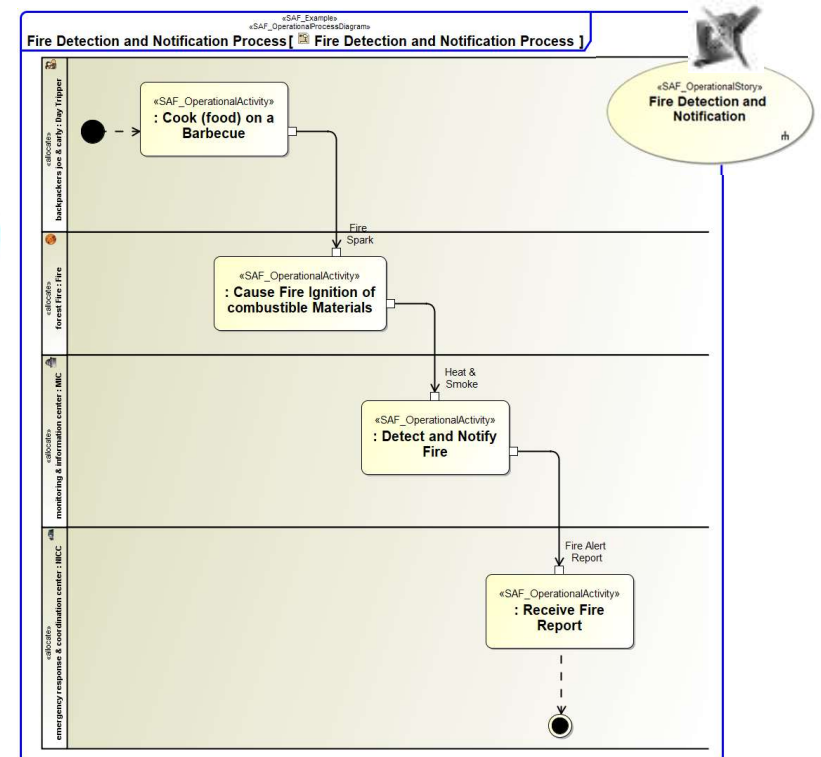

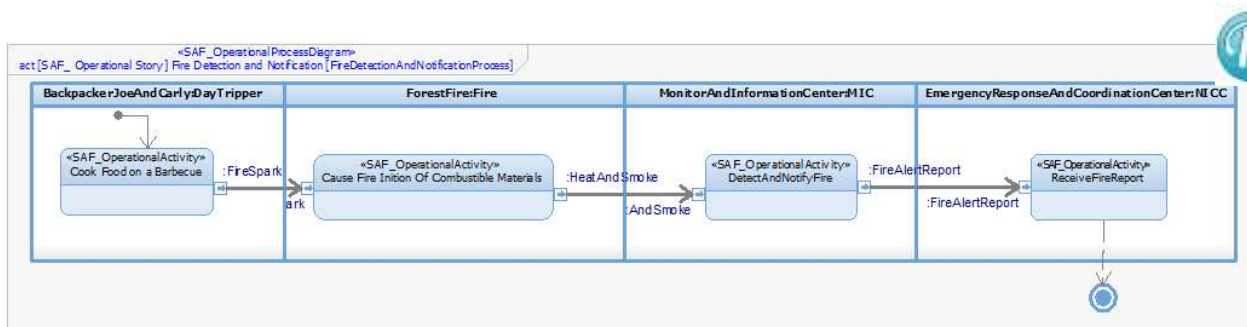

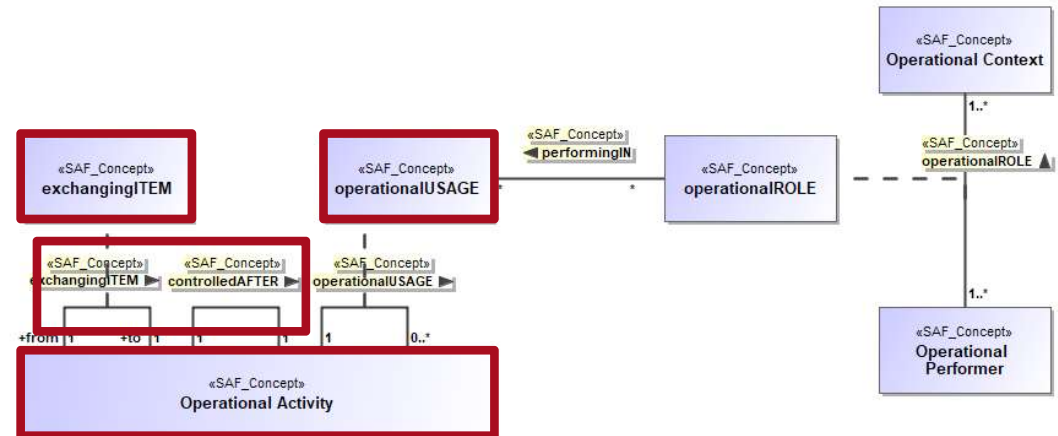

SOV Operational Process ViewPoint

- Purpose:
Describe the operational processes with their composition of operational activities, the sequence of execution and their exchange.

The assignment of operational processes to operational performer(s) is captured.

We showed

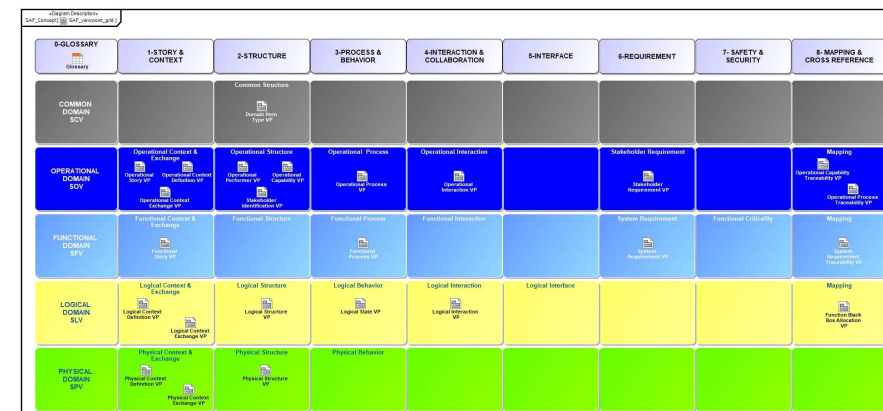

- Interrelated metamodel for Operational Domain
- (sub)set of Operational ViewPoints using information consistently
- Comparability of tool representations

We did not show

- All 11 Operational ViewPoints
- The other domain layers SAF consists of

Steps in 2021

- Finalization of Operational Domain
- Move on to next SAF Domain to elaborate

Vielen Dank für Ihre Aufmerksamkeit!

Sascha Ackva

AG-Leiter SAF (mit Michael Leute)
